BROADBAND2GO IS SUBJECT TO THE TERMS OF SERVICE FOUND AT VIRGINMOBILEUSA.COM.

Estimating wireless coverage and signal strength is not an exact science. There are gaps in coverage within our estimated coverage areas that, along with other factors both within and beyond our control (network problems, software, signal strength, your wireless device, structures, buildings, weather, geography, topography, etc.), will result in dropped and blocked connections, slower data speeds, or otherwise impact the quality of services. Services that rely on location information, such as E911 and GPS navigation, depend on your device's ability to acquire satellite signals (typically not available indoors) and network coverage. E911 services also depend on your local emergency service provider's systems and support.

Coverage not available everywhere. Visit [virginmobileusa.com](http://virginmobileusa.com) for a detailed map and to check coverage in your area. Customers have access to broadband service with average download data speeds between 600 and 1.4 Mbps and average upload speeds between 350 and 500 Kbps where available. When switching between plans you will not be refunded for the difference of any payments you've already made, and you will lose your remaining unused Megabytes of data.
